CLELAND SPIRAL SEPARATOR

FOR SEPARATING CORN FROM SOYBEANS

The Cleland Spiral Separator is the most successful method of separating splits, weed seed, or corn from soybean. Each unit has ten separating inner flights. Round seed separates into two grades, portions of which can be controlled by adjusting levers. Left or right round discharge is optional to facilitate round seed to be discharged in the same area when utilizing more than one unit. The Cleland Spiral Separator is available with a self-cleaning hopper to ensure total emptying of the top hopper bin.

*Separates Anything Round
From Anything That Is Not Round*

Requires No Power

Operates By Gravity

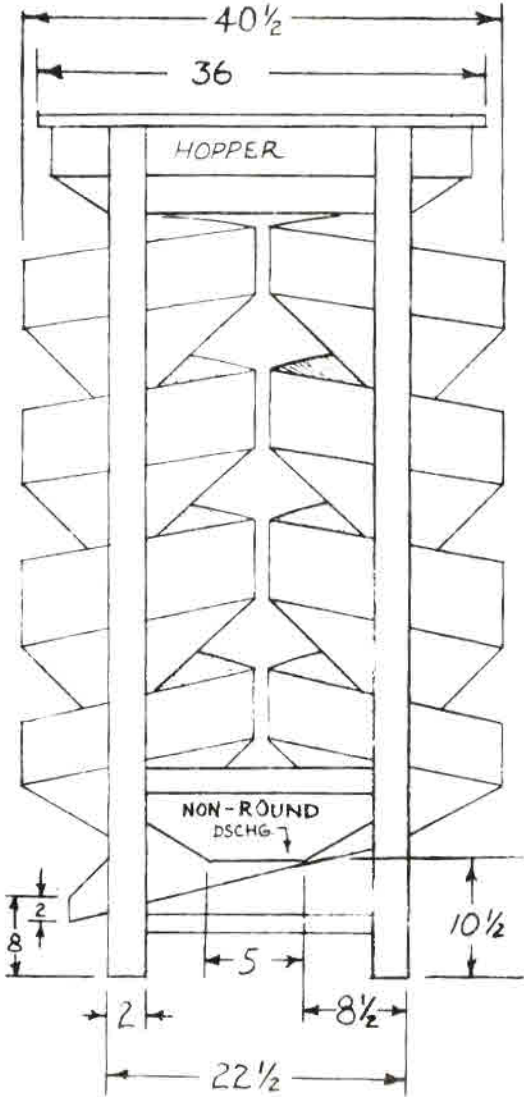

The Cleland Spiral Separator is also successful in separating a variety of seed, such as Vetch, Peas, Pepper, Rape, Turnip, Coriander, Milo, Mustard, etc. from Wheat, Oats, Barley, Flax, Screenings, etc. Capacities for these and other applications are available upon request.
